Wellthy Case Study — Quick Sheet

Interview: Friday, April 17, 2026 — Zoom, ~60 min | **Slides:** 14 | **Audience:** Engineering-heavy panel

LIVE LINKS

What	URL
Prototype	thekevinboyle.github.io/cs-intake-flow/
Presentation	thekevinboyle.github.io/cs-intake-flow/presentation.html
Repo	github.com/thekevinboyle/cs-intake-flow
Design system	github.com/thekevinboyle/cs-intake-flow/tree/main/design-system
Figma	figma.com/design/W6QnjqTIlUcH57o0qUq2JI

NARRATIVE ARC (~18 MIN SCRIPTED → ~40 MIN Q&A)

Act 1 — The discovery journey (slides 1–7, ~9 min)

AI-assisted auditing found a real problem in the live product. Open with method, not credentials. Frame findings as **opportunities**, not critiques.

Act 2 — A starting direction (slides 8–11, ~8 min)

60% of a solution: empty-state redesign (polished), one intake frame (sketch), open questions. **Invitation to collaborate, not a finished deliverable.**

Act 3 — Why this matters (slides 12–14, ~3 min)

Personal hook, why the role, close. The Q&A is where this deck is designed to shine.

SLIDE-BY-SLIDE

#	Slide	Time	Land this
1	Cover	15s	Advance immediately
2	Started with the product	45s	Discover → Decide → Design
3	Logged into the product	60s	"From the live app, not guesswork"
4	Three eras at once	90s	Let them read the code block
5	CTA takes users off-app	90s	Point at the URL bars
6	First minute breaks twice	90s	Hidden button + empty card, side by side
7	Same opportunity	60s	Reframed as opportunity. **Pause.**
8	Before → After	120s	**Craft moment.** Walk through changes.
9	Intake as conversation	90s	"A direction, not a spec"
10	Explore together	90s	**Collaborative slide.** "Hypothesis, not a plan."
11	How AI shaped this	90s	"These files are in the repo"
12	Personal hook	30s	Present tense. "OK — back to the work."
13	Why this role	45s	"How I'd operate, not just what I'd ship"
14	Let's talk	15s	"The questions on slide 10 are real." **Wait.**

RESERVE AMMO FOR Q&A

"Show me the other card states"

Open prototype → Section 2. "Built all three. Showed one on purpose."

"What about the full intake flow?"

Prototype → Section 4. All four frames built. "Showed one — the rest needs Care Coordinator input."

"How long would this take?"

Card: ~1 sprint. Token migration: 2 more. Intake rewrite: 3–5 sprints. "Outside guesses. Week one is validating them."

"Tell me about the legacy tech stack"

- Django (`csrfmiddlewaretoken`), Knockout.js (`data-bind`), jQuery UI Autocomplete
- Hidden Next button: `data-bind="enable: !submitted(), visible: validForm"`
- Modernizr 2.8.3 still loading

"Walk me through the code"

Open `RecipientCard.tsx` — props, color lookup, state computation, clean class list, focus-visible ring. "60% shorter than the live version."

"Tell me about the migration approach"

Open `design-system/migration-runbook.md`. "One command per component. Engineer reviews and ships."

TOP 5 Q&A ANSWERS

1. **"How long?"** → "A week. AI compressed the audit from 2 days to 3 hours. Design decisions were mine."
2. **"What did you get wrong?"** → Care Coordinator workflow, effort numbers, whether a previous attempt exists.
3. **"Why only the empty state?"** → "Highest leverage. Others are built. Showed one — the rest needs the team."
4. **"First week?"** → "Listening. Validate with the EM, ride along with a coordinator, find what's been tried."
5. **"AI code in production?"** → "Human reviews, human takes responsibility at merge. Origin matters less than ownership."

QUESTIONS TO ASK THEM

1. "Hardest open problem in the design system right now?"
2. "How does design-eng collaboration work when specs are incomplete?"
3. "What would the first three months look like?"
4. *(If vibe is good)* "Anything about this case study that surprised you?"

PRE-INTERVIEW CHECKLIST

- [ ] Presentation tab open
- [ ] Prototype tab open (deployed URL)
- [ ] Local dev server running (backup)
- [ ] RecipientCard.tsx on GitHub (code walkthrough)
- [ ] design-system/ on GitHub (artifact walkthrough)
- [ ] This sheet on second monitor
- [ ] qa-prep.md in hidden tab
- [ ] Camera, mic tested, notifications off, water nearby

IF THE PROTOTYPE BREAKS

1. **Deployed URL** — always live
2. **Figma file** — captured page
3. **"Let me show the code instead"** — open GitHub

> ***The thesis:*** *Started with the product, found a real problem, built a starting direction, and brought questions for the team.*
